

EMPLOYEE EXPERIENCE PLUGINS

IDEATION-Plugin

Release Notes Version 3.2.1

IDEATION Plugin

Content Version 3.2.1

NEW FEATURES

new

- Notification about new ideas
- Restricting authorized authors for ideas

IMPROVEMENTS

- Direct link to ideas form
- Improvements for accessibility
- Success message after publishing an idea

BUG FIXES

- Faulty deep link on idea from push notification
- Incorrect filter for "My ideas"

01 NEW FEATURES

Notification about new ideas

Problem until now

Editors were not informed when a new idea was posted until now. They had to check this list continuously.

Improvement

With the new feature "Push Notification for New Elements", editors can define users who will automatically **receive a notification when a new idea is published**.

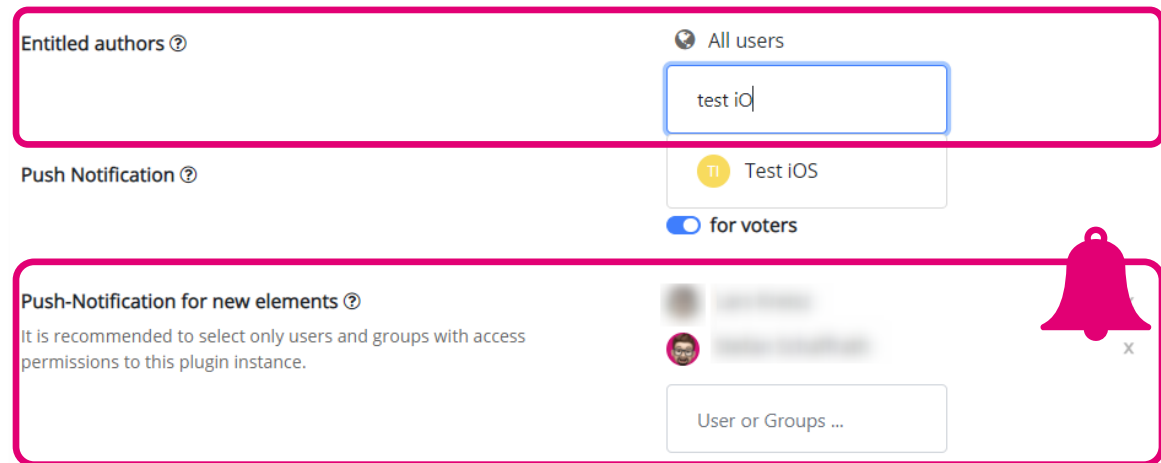

Note: The use of this function is not automatically activated. Please contact plugins@t-systems-mms.com for more information. (API access required.)

Restricting authorized authors for ideas

Editors can now restrict which users are allowed to publish ideas in the plugin's settings. By default, ideas can still be posted by all authorized users.

This new feature enables the use case of pure idea voting for a fixed set of ideas.

Note: The use of this function is not automatically activated. Please contact plugins@t-systems-mms.com for more information. (API access required.)

The screenshot shows two configuration panels. The top panel, titled "Entitled authors", has a dropdown menu set to "All users" and a search input field containing "test iQ". Below it, the "Push Notification" section has a dropdown menu set to "Test iOS" and a toggle switch labeled "for voters" which is turned on. The bottom panel, titled "Push-Notification for new elements", includes a warning message: "It is recommended to select only users and groups with access permissions to this plugin instance." Below the message is a search input field with the placeholder text "User or Groups ...". A red bell icon with an 'x' is visible in the top right corner of this panel.

02 VERBESSERUNGEN

Direct link to idea form

In some use cases, our customers have requested a direct link to the Ideation Form. This is now possible with the new functionality, appending the parameter /add to the URL of the Ideation Plugin.

Example:

Ideation URL = <https://mmsquiztest.staffbase.rocks/content/mms.ideation/5eeb2e8417668c23f43c7872>

Direct link to idea form = <https://mmsquiztest.staffbase.rocks/content/mms.ideation/5eeb2e8417668c23f43c7872/add>

Improvements for accessibility

Accessibility to information technology is also important for our plugins. Therefore, we have implemented some measures that simplify access to the ideation plugin also for people with disabilities.

Success message after publishing an idea

Users now receive direct feedback after successfully publishing their idea.

03 BUG FIXES

Faulty deep link on idea from push notification

The direct link to an idea from a notification was incorrect. Users were not directed to their idea and landed on an error page. This error has now been fixed with the new version. When clicking on a notification for an idea, the user is taken directly to the detailed view of the idea.

Incorrect filter for "My ideas"

The filter "My ideas" was faulty. Not all idea statuses were considered. This error is now fixed. The filter now includes all of the user's ideas, regardless of their status and the plugin's visibility configuration.
