- Configuration of the color of the progress bar
- Option to configure the reply buttons sticky for the mobile view
- Greek language support
- Simplified configuration of colours

### BUGFIXES

- Cutting of pictures

**01**

**NEW FEATURES**

# ONE TIME PARTICIPATION

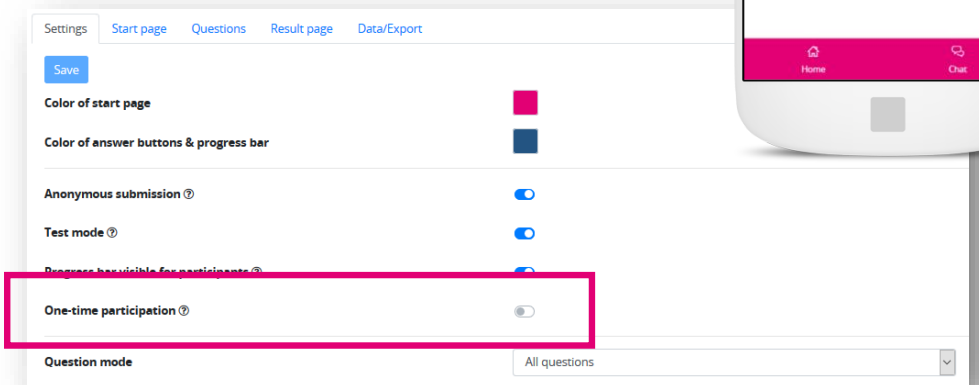

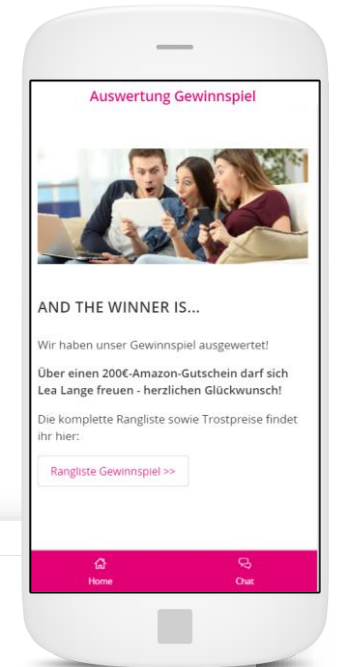

## PROBLEM

Users could take part in a quiz as often as they wanted. This made it difficult to implement the **use case** of a **competition**. Up to now, editors had to manually edit the results for this case, so that only the first participation of the user was counted.

## NEW FEATURE

Editors now have the option of activating the **"One-time participation" mode** for a quiz.

If active, users can only participate once and at the end of the quiz they will only receive the result for their score, but not an overview of all questions and the correct answers.

# GETTING USER FEEDBACK

## PROBLEM

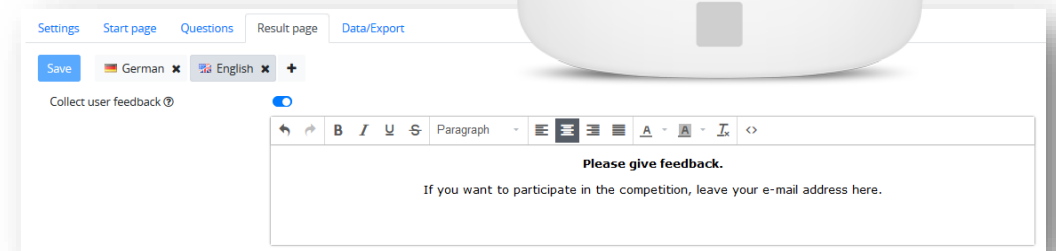

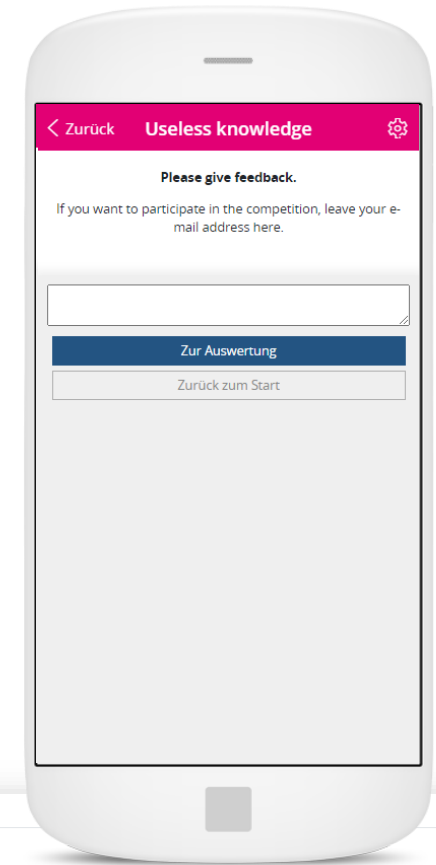

So far, users have not been able to give feedback in a quiz.

## NEW FEATURE

Editors now have the possibility **to ask for user feedback** in the form of a quiz. The user can give this feedback at the end of the quiz.

This **supports new use cases** for the evaluation of the quiz. From individual feedback on the quiz to the possibility of requesting contact information within the context of a competition, our quiz is now even more flexible.

The information provided by users is also made available to editors for **export**.

**02**

**IMPROVEMENTS**

# IMPROVEMENTS

## READ ONLY ACCESS

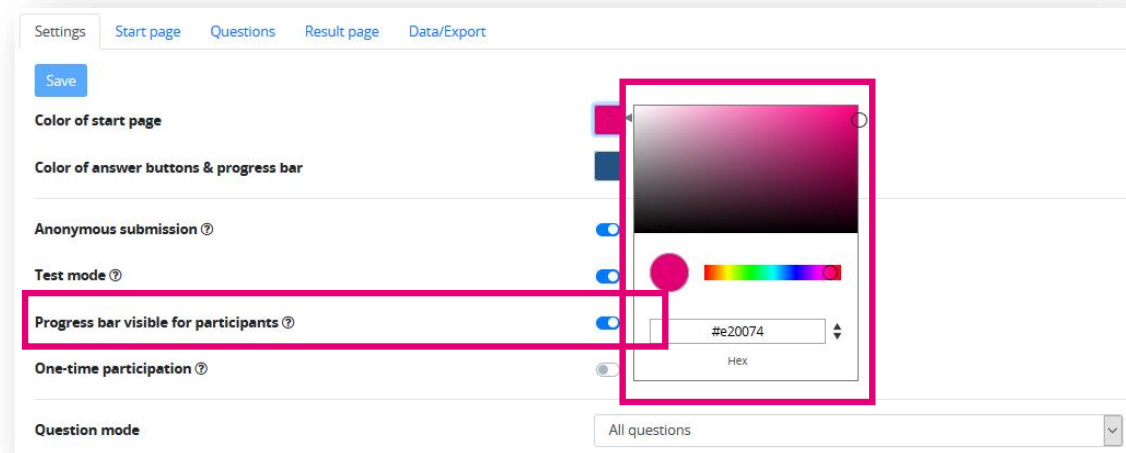

Editors now have full **read-only access** to all configurations and settings of the quiz, even if answer records have already been received.

## PROGRESS BAR

The **color of the progress bar** can now be defined by the editor. Additionally there is the possibility not to display the progress bar. This is recommended when integrating a quiz directly into a page together with other widgets.

## CONFIGURATION OF COLORS

Color configuration is now simplified for editors by a new **color selection tool**.

# IMPROVEMENTS

## STICKY ANSWER-BUTTONS

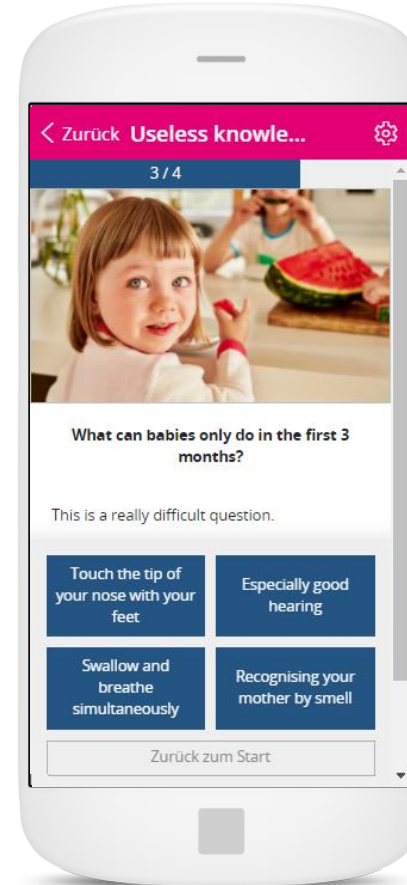

Editors now have even more flexibility in how questions are displayed in the mobile view.

For each question it can be defined **whether the answer buttons in the mobile view should always be displayed in the visible area or not.**

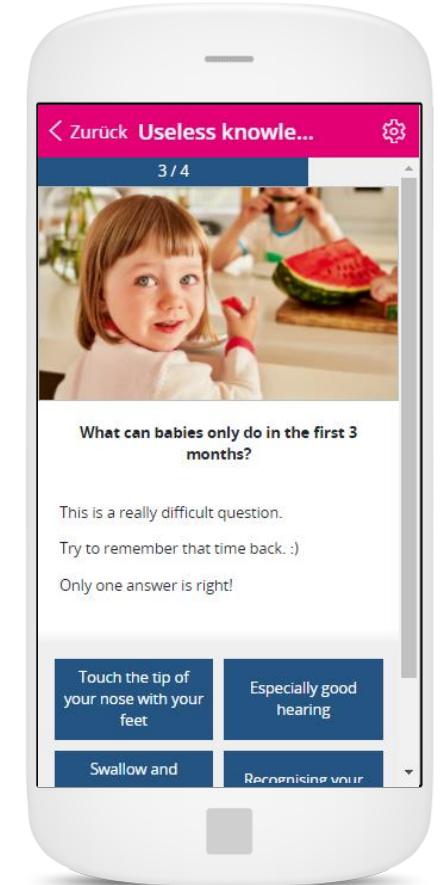

This gives editors more options when designing questions in connection with images.

## GREEK LANGUAGE

The interface languages for users are now also available in Greek.

STICKY

NOT STICKY

**03**

**BUGFIXES**

## CUTTING OF PICTURES

Pictures that are included in the quiz on the start page or for questions were not uniformly displayed in a 16:9 format until now, as indicated in the tooltip.

We have corrected this bug. Now **all pictures are displayed consistently in 16:9 format.**
