Release Notes – Quiz 4.0 - Overview.

NEW FEATURES

- Quiz Plugin UI/UX Redesign
- Multi-Quiz Leaderboard* for Campaigns & Gamification (Widget)

IMPROVEMENTS

- Improved editor usability for anonymous mode
- Transparency regarding profile fields in incognito mode

*This feature is currently only available on the Staffbase platform

01

New Features.

Quiz Plugin UI/UX Redesign.

Complete redesign of the quiz plugin

We have completely revamped the quiz plugin to create a more modern, intuitive and consistent user experience.

The new design improves both quiz participation and configuration and management for editors. This makes interactions clearer, easier to understand and, overall, more user-friendly.

What's new?

- Updated user interface, including a redesign of the leaderboard view
- Improved participation flow for a more intuitive quiz experience
- Enhanced readability and user guidance across different devices

Added value & benefits

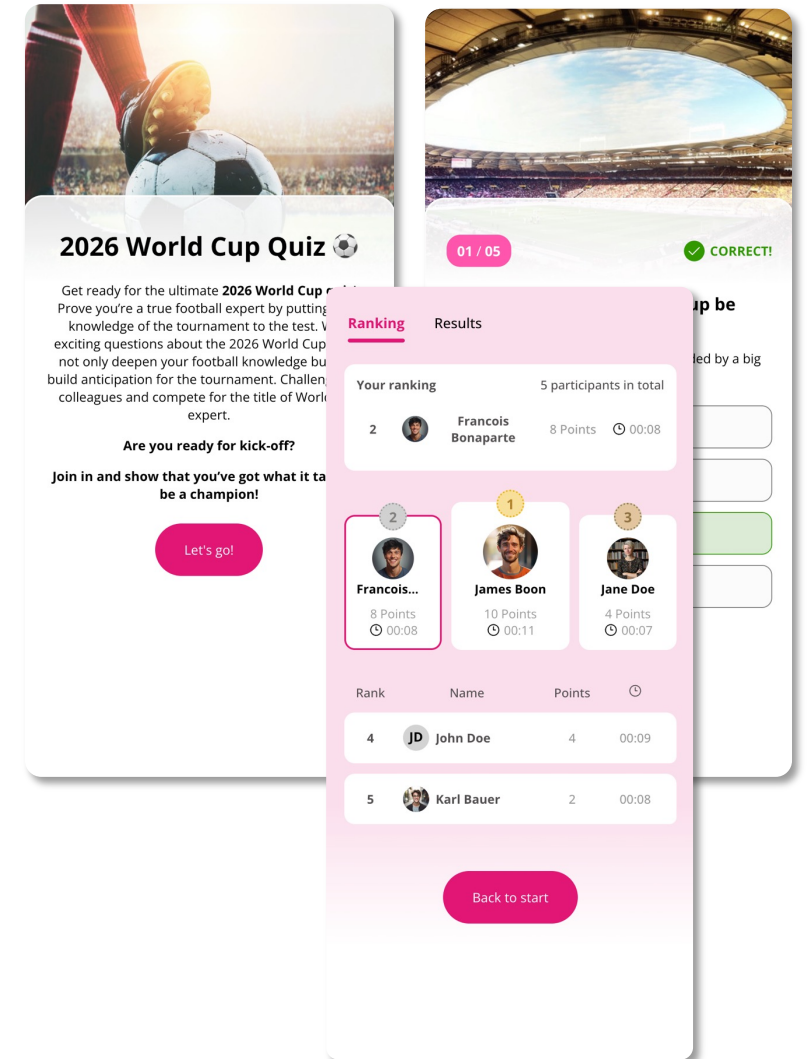

- Greater user engagement through clearer and more appealing user guidance
- Improved usability and greater acceptance of quiz and engagement formats

Consequences

The redesign affects both:

- End users who take part in quizzes
- Editors/administrators who configure and manage quiz content

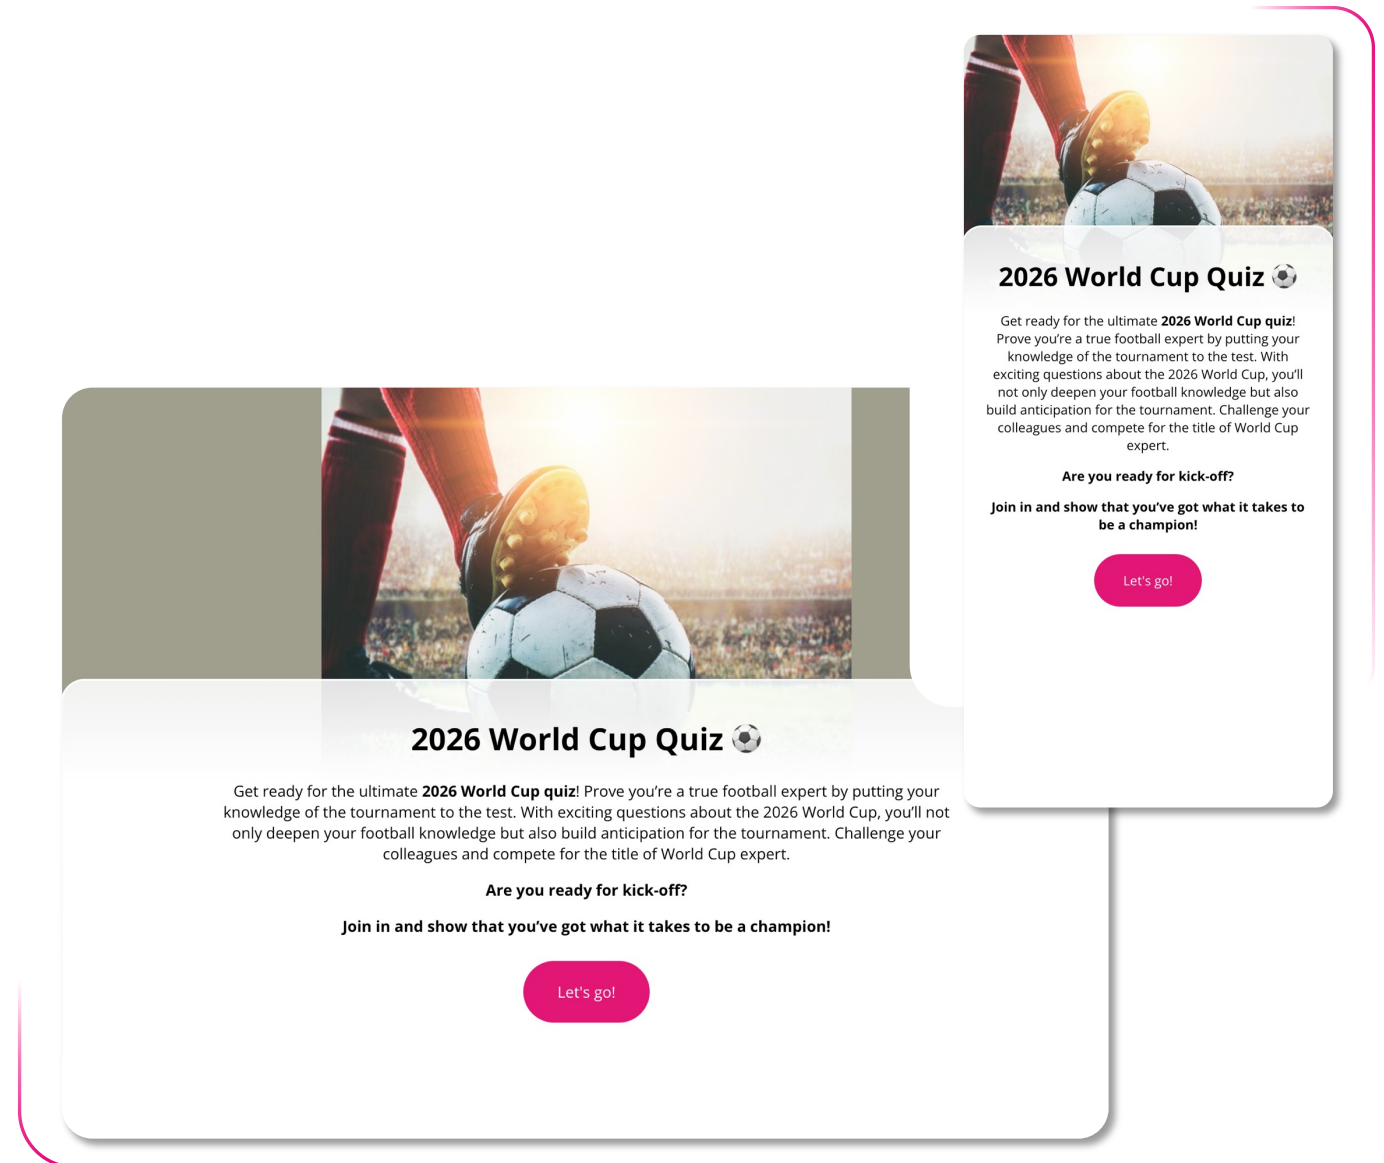

Existing quizzes will continue to work as normal. No migration steps are required.

Redesign – Start Page.

Start Page – New design & simplified configuration

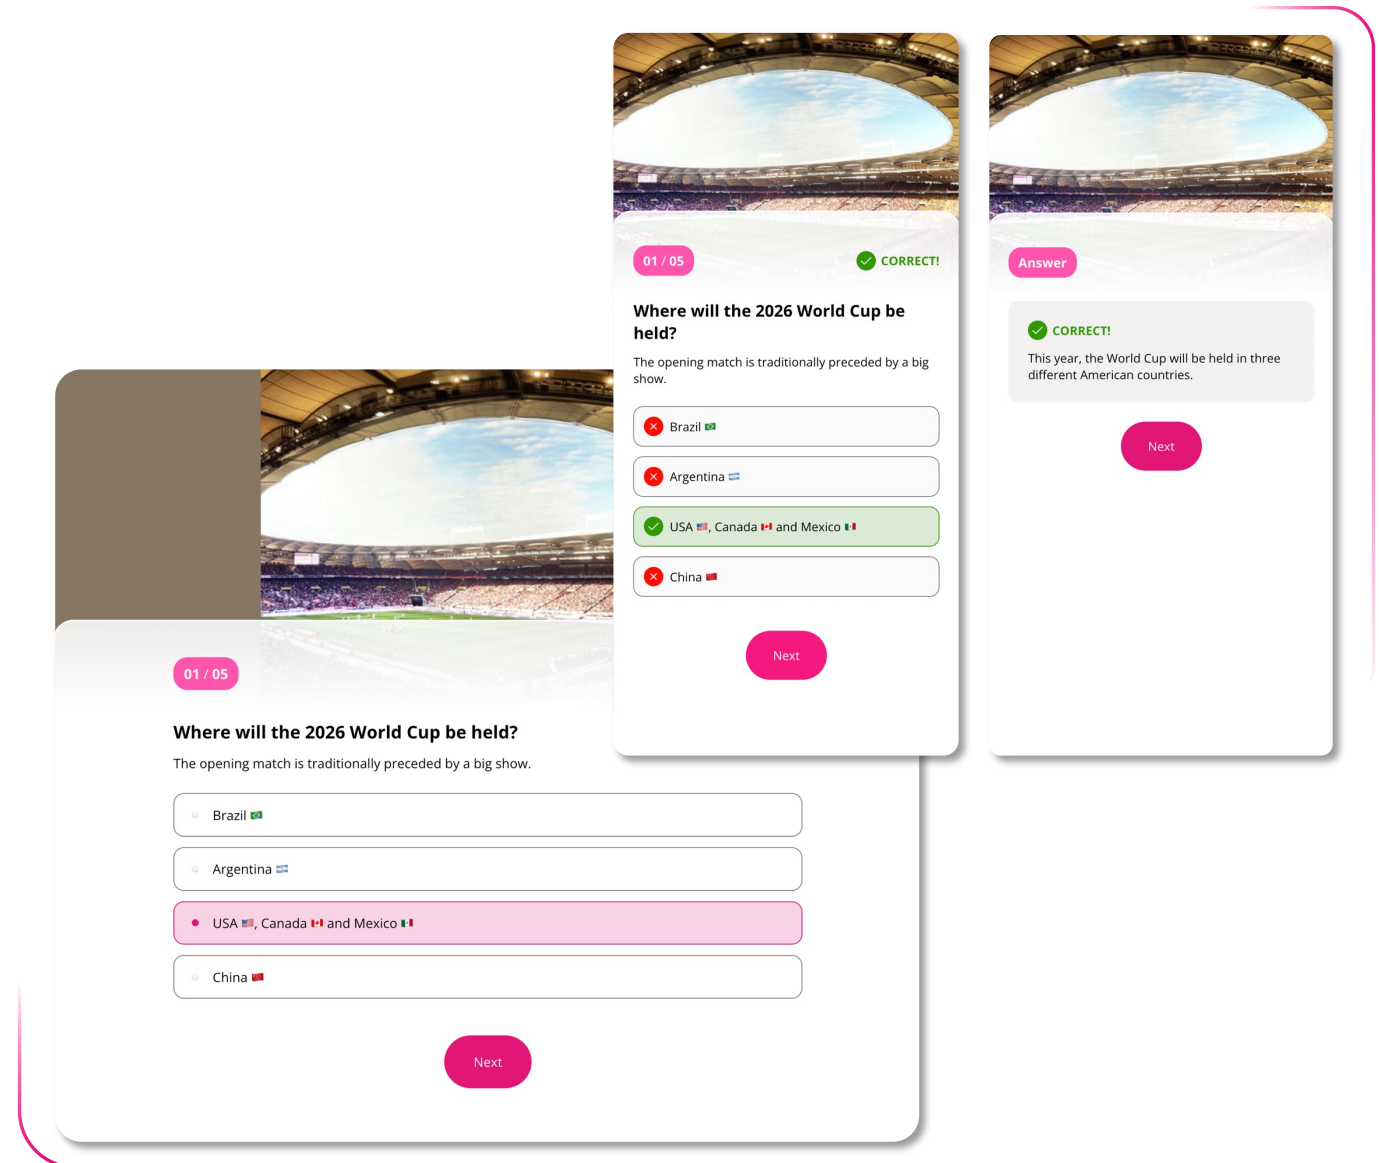

- Images are now displayed consistently above the content on both desktop and mobile devices
- Consistent visual presentation across all views for a seamless user experience
- Recommended image format: 16:9 with the focal point centred
- Simplified configuration by reducing the layout to a single central content area
- No longer requires separate fields for titles or headings
- Flexible content design and structuring made possible through formatting options

Redesign – Question Page.

Question page – New design & improved user guidance

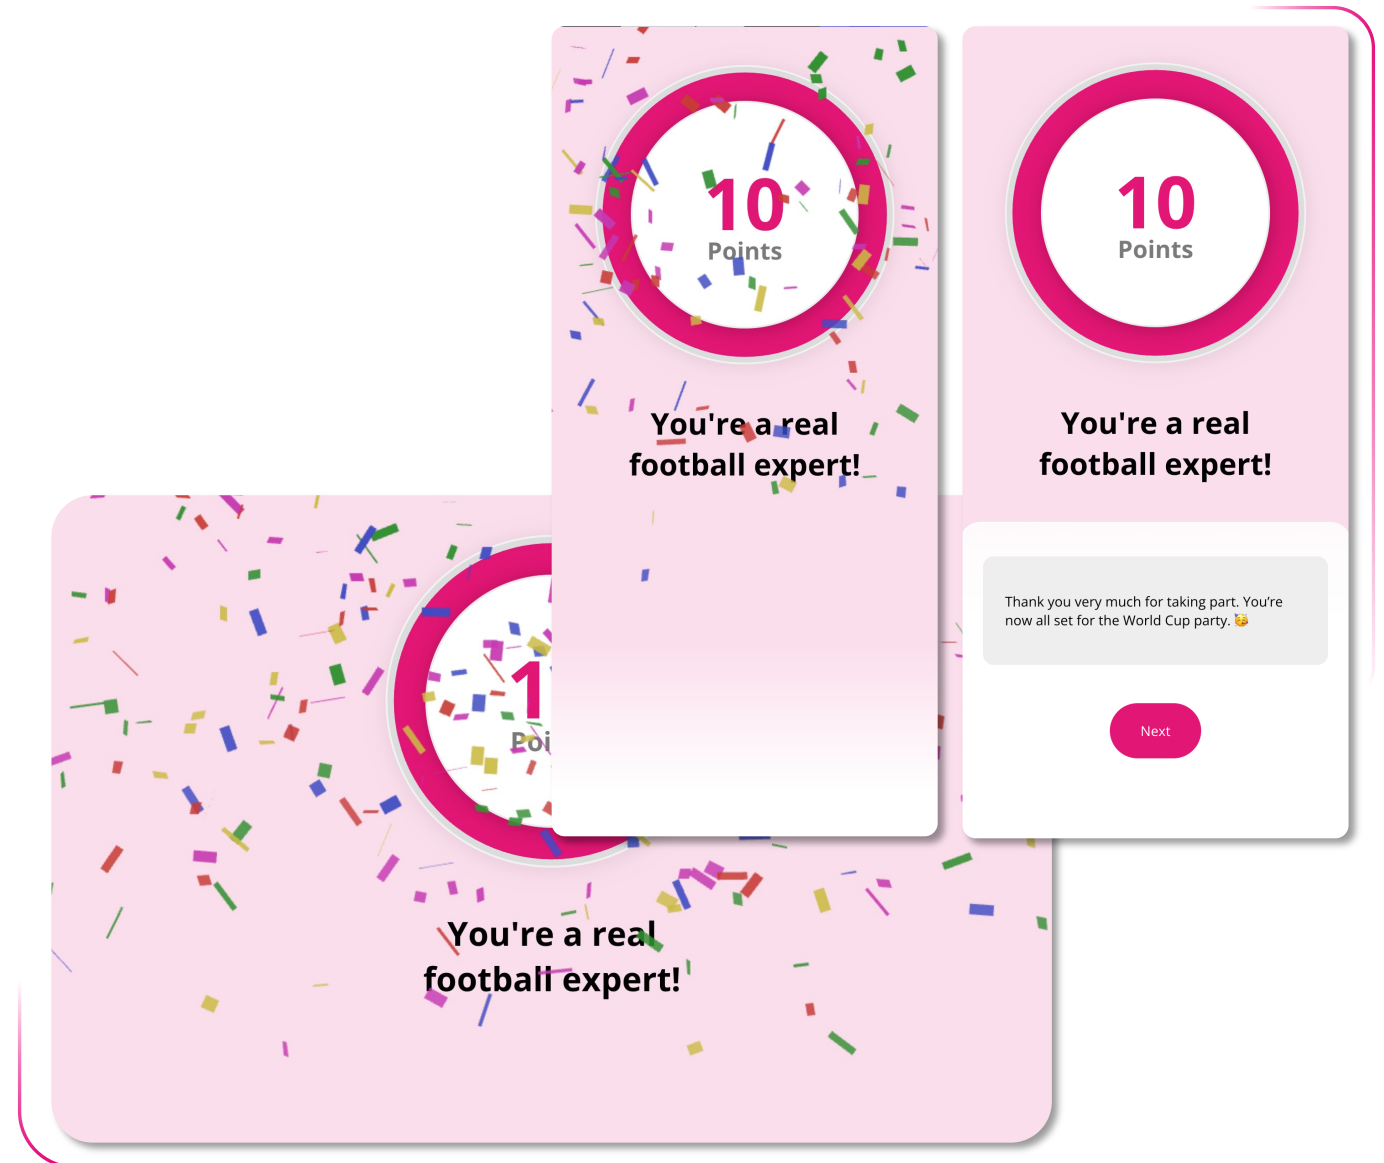

- Consistent image display above the content on desktop and mobile devices
- A more modern design for improved readability and focus
- Progress bar replaced by a compact display such as 'Question 2 of 3'
- Answer texts are no longer truncated and are displayed in full; recommendation: keep answer options as compact as possible, particularly for questions with a time limit
- Answer feedback (if configured) is now displayed on a separate intermediate page
- Clearer separation between submitting answers and feedback for improved user guidance

Redesign – Score evaluation.

Score evaluation – New design & improved feedback

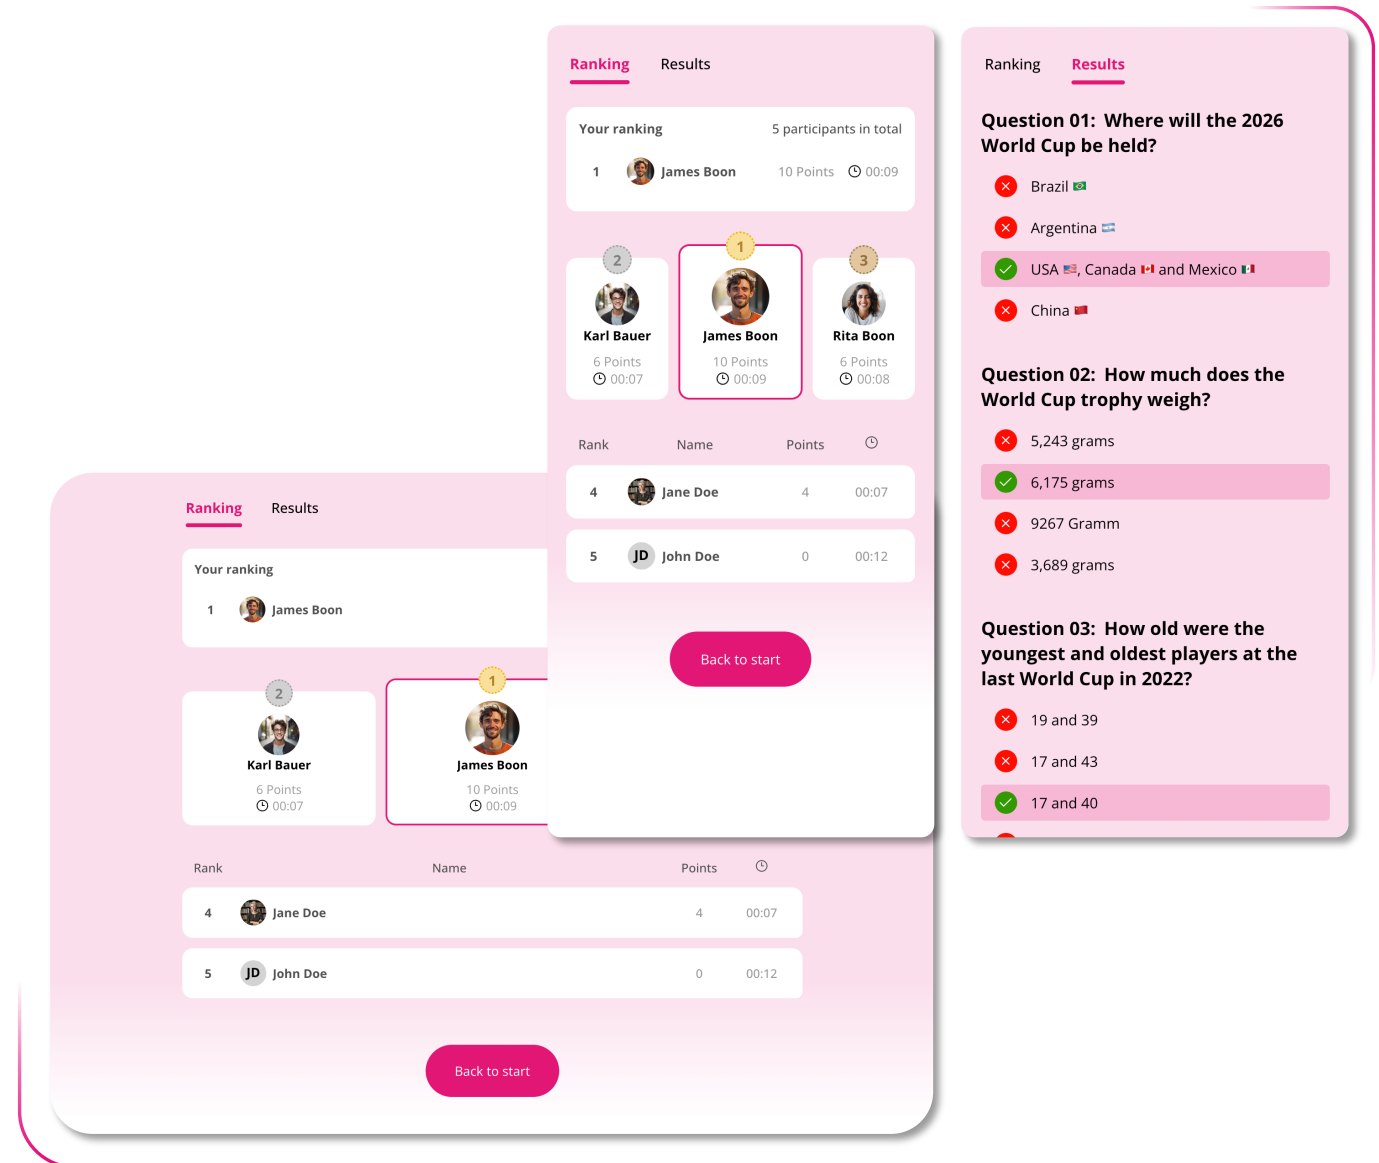

- Updated confetti animation for a more engaging and motivating user experience
- Improved display of score-based feedback on desktop and mobile
- Clearer distinction between score and general feedback
- Better readability and a clearer presentation of results
- A more modern and consistent design

Redesign – Results and rankings.

Results & Leaderboard – New Design

- The leaderboard ranking is now the default view after completing the quiz
- Completely revamped leaderboard with a new layout for the top 3 positions
- A more engaging and motivating presentation of results
- Modernised results page with an overview of all questions and correct answers (where enabled)
- Clearer structure and improved readability of the results page
- Consistent and modern design

Multi-quiz leaderboard* for campaigns & gamification (Widget).

With the new multi-quiz leaderboard, multiple quiz instances can now be combined into a single leaderboard for the first time. This makes the quiz plugin ideal for long-term campaigns and gamification scenarios, such as regular quiz series running over several weeks or months.

Participants accumulate points across different quizzes and can view their total score and current ranking at any time.

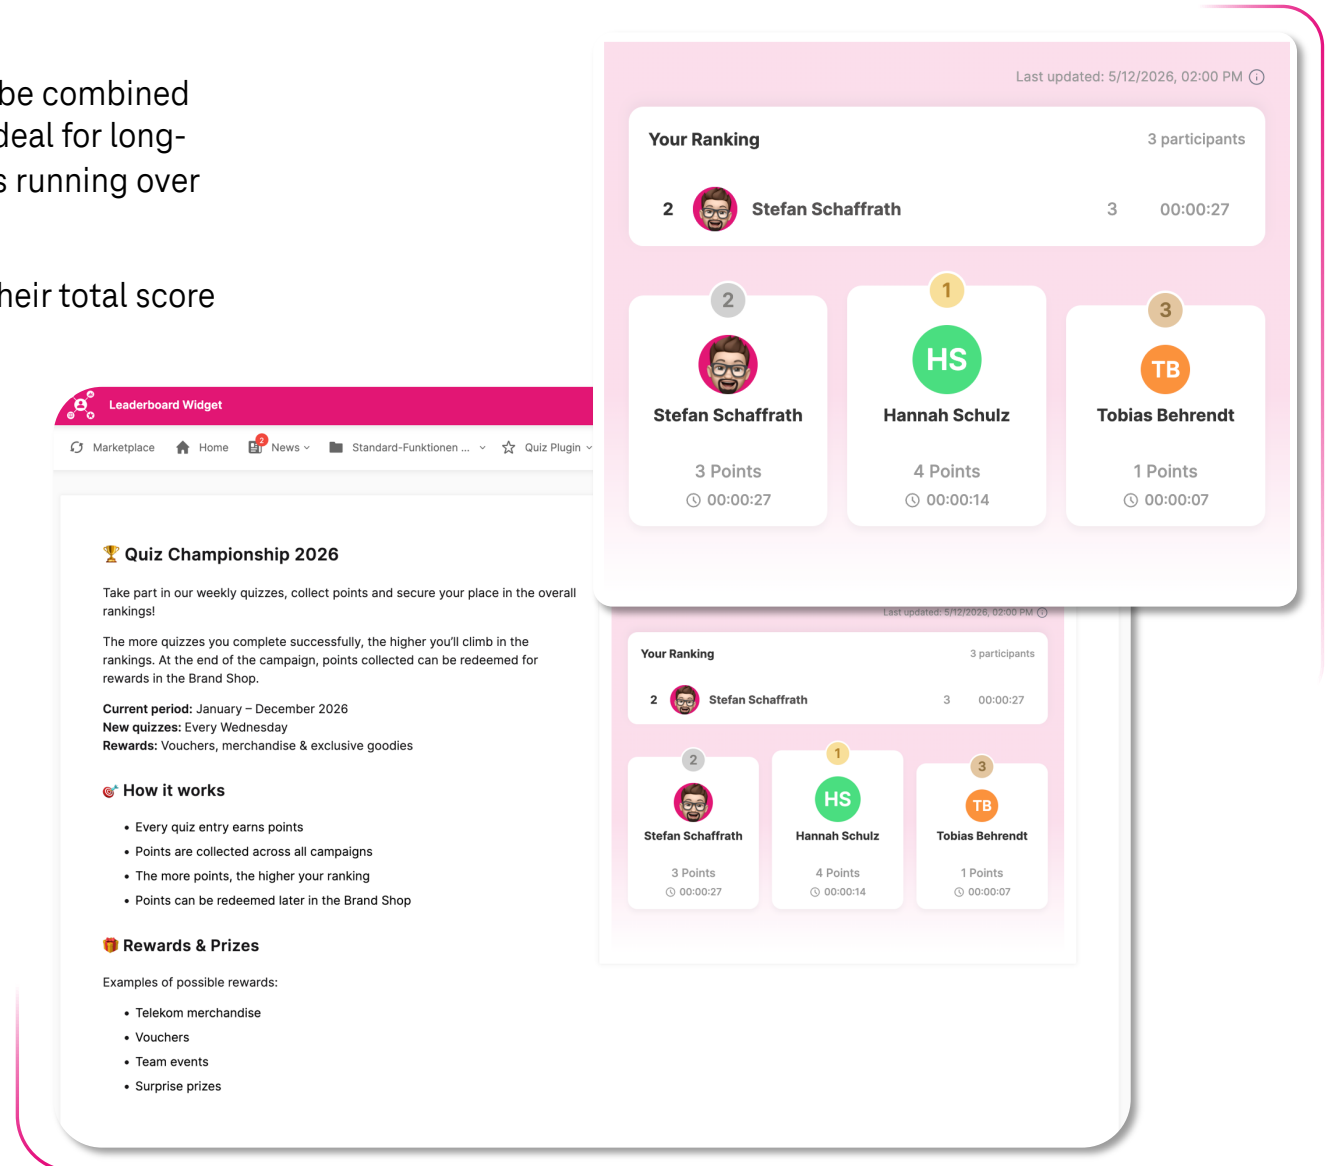

Highlights

- New widget for shared leaderboards across multiple quiz instances, available on Staffbase pages
- Totals a user's points across selected quizzes
- Displays the overall ranking based on the points accumulated
- Your own ranking remains visible, even outside the top rankings

Benefits for editors

- Flexible selection of quiz instances included
- Configurable highlight colour
- Optional title and description for campaigns
- Easy integration as a widget within Staffbase

*This feature is currently only available on the Staffbase platform

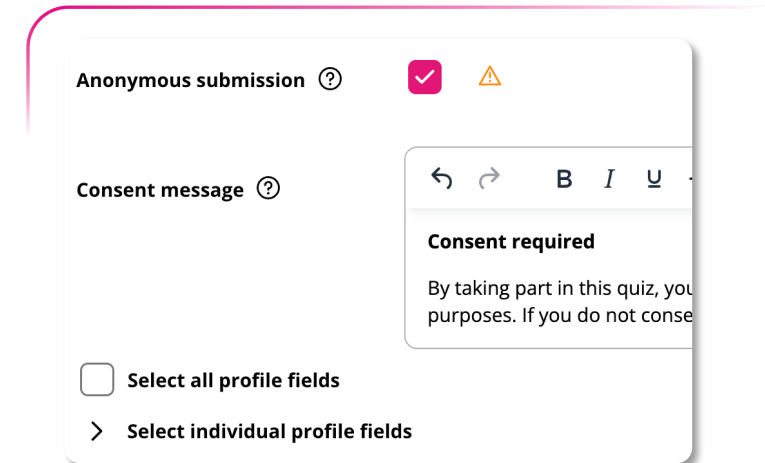

02

Improvements.

Improvements.

Improved editor usability for anonymous mode.

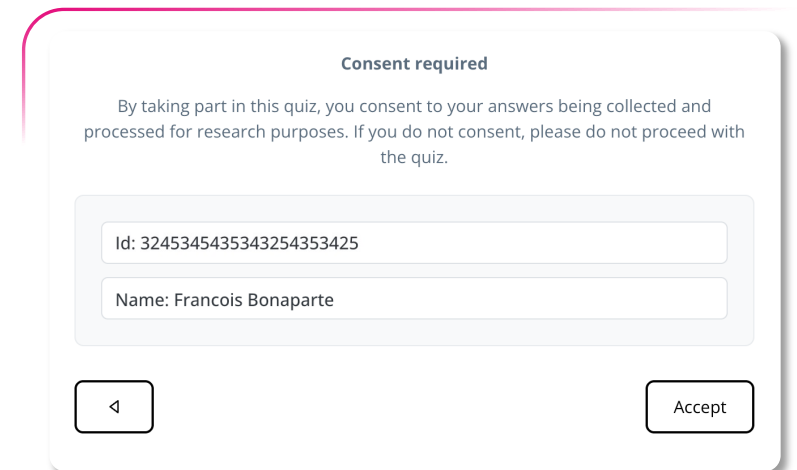

The configuration of anonymous mode in quizzes has been made clearer. The selection of profile fields is now displayed in a compact, collapsed view by default, reducing unnecessary scrolling. Individual profile fields can still be easily configured via a drop-down section if required.

Transparency regarding profile fields in anonymous mode.

The consent prompt in anonymous quiz mode has been improved to provide greater transparency for users. Profile fields are now displayed along with their current values, so that users can clearly see which information is being processed.

The information is presented clearly in the format “Field name: Value”, thereby improving the clarity and traceability of data usage.
