Quiz Plugin

Release Notes 4.1

Plugin Quiz.

Use Case

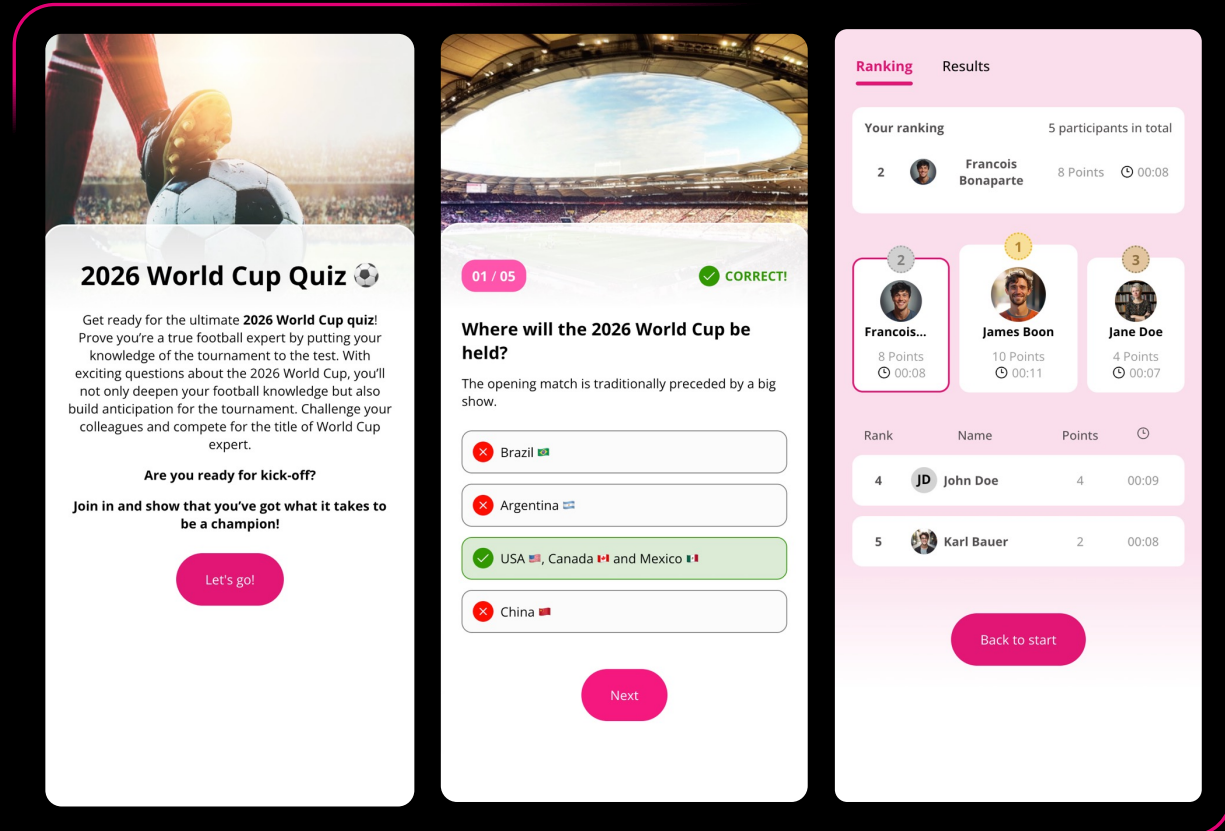

Enhance your intranet or employee app with interactive quizzes for knowledge sharing, training, compliance programs, campaigns, and internal communications.

With flexible question types, personalized feedback, leaderboards, and multilingual support, the Quiz Plugin enables everything from simple knowledge checks to comprehensive learning and engagement campaigns.

Whether you are running e-learning initiatives, awareness campaigns, or gamification programs, the Quiz Plugin helps deliver knowledge effectively, increase participation, and measure results with confidence.

Features

- Flexible Question Types (Single Choice, Free Text, and Numeric Responses)
- Multilingual Quizzes with Full Localization in 25 Languages
- Participant Rankings, Leaderboards, and Gamification
- Personalized Feedback to Reinforce Learning
- CSV Export and Advanced Analytics
- Anonymous and Identified Participation Options
- Scheduled Quiz Launches and Campaign Management
- Randomized Question Pools and Reusable Templates
- Multi-Quiz Leaderboard Widget for Enterprise-Wide Gamification

Quiz 4.1 – Overview.

NEW FEATURES

new

- New question type: Free Text and Numeric

IMPROVEMENTS

- Improved Multilingual Support
- Language Information Available in Quiz Exports

BUG FIXES

- Resolved Display Issues in Firefox browser

New Features.

New question type: Free Text and Numeric.

The Quiz Plugin now supports two additional question types: **Free Text** and **Numeric**.

Free Text questions allow participants to provide open-ended responses, enabling a wider range of knowledge checks, training scenarios, and surveys.

Numeric questions support numerical input for estimation tasks, calculations, and quantitative assessments.

Evaluation is performed automatically, including input normalization and export of responses together with relevant metadata.

Highlights

- Increased flexibility for quiz design
- Support for open-ended knowledge checks
- Numeric estimation and calculation questions
- Expanded use cases for training and compliance initiatives

The image displays two overlapping quiz question cards. The top card, labeled 'Free text', features a background image of a bar chart with an upward arrow and a target. It contains the question: 'What is the name of the key figure that compares the financial benefits of an investment with its costs?'. Below the question is a text input field with the placeholder 'Add text...' and a 'Next' button. The bottom card, labeled 'Numeric', features a background image of a calendar and a clock. It contains the question: 'How many weeks are there in a calendar year?'. Below the question is a numeric input field with a minus sign, a plus sign, and the number '0'. It also has a 'Next' button.

Improvements.

Improved Multilingual Support.

The localization of the Quiz Plugin has been expanded and standardized. User interface elements such as buttons, dialogs, and system messages are now displayed much more consistently in the selected language.

International rollouts benefit from a consistent user experience without language switching within the quiz. This helps reduce support requests, improves user adoption, and simplifies deployment in multilingual organizations.

Highlights

- Complete translation coverage for all UI elements
- Consistent localization of buttons, dialogs, and system messages
- Support for 25 languages
- Reduced reliance on fallback texts in the default language

Benefits

With this release, participants benefit from a fully localized user experience without disruptive language inconsistencies throughout the quiz. This improves usability, supports international rollouts, and provides a consistent experience across all supported languages.

In addition, the optimized translation management simplifies future maintenance and makes it easier to extend support for additional languages.

Supported languages

Bulgarian, Bosnian, Croatian, Czech, Danish, Dutch, German, English, Estonian, Finnish, French, Greek, Hungarian, Italian, Latvian, Lithuanian, Macedonian, Polish, Portuguese, Romanian, Swedish, Serbian, Slovak, Slovenian, and Spanish.

Language Information Added to Quiz Exports.

Quiz exports now include the ISO language code of the browser or platform language detected when a participant starts a quiz. This makes it easier to analyze results across language versions and gain deeper insights into multilingual and international deployments.

Benefits

- Analyze participation and results by language
- Improve visibility in international rollouts
- Gain more detailed reporting insights

Bug Fixes.

Bug Fixes.

Fixing display errors in Firefox browser.

There was occasionally a display issue on the analysis page in Firefox. We have now fixed this.

Any questions?

Our team will be happy to help!
