- Re-Design
- New like-animation
- Liking directly on Thank You cards within the overview
- Configuring fixed initial values for branding colors (highlight and background colors)

<sup>1</sup> Feature only available for Staffbase

01

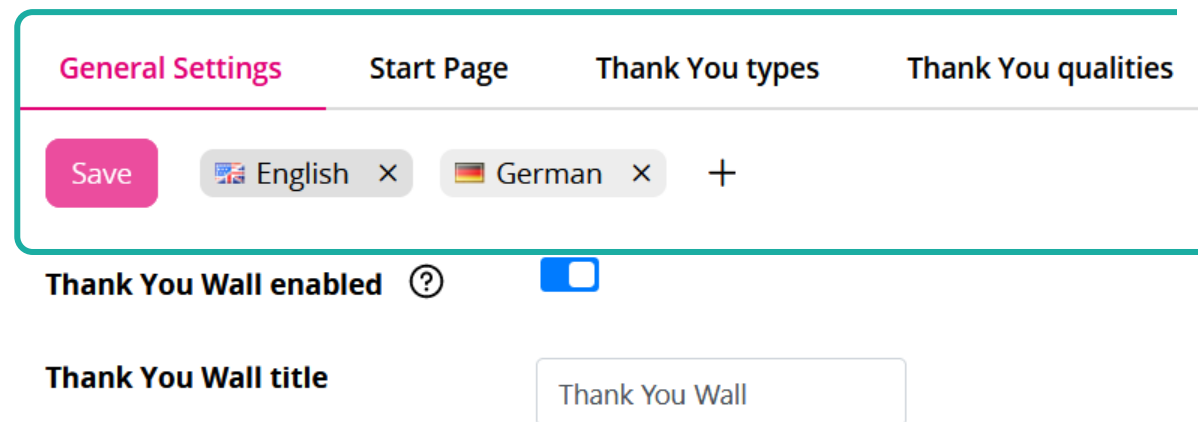

**New Features.**

# New language options.

With this release, we have added the ability to offer some **editable content in multiple languages**. This includes

- the title of the thank you wall
- the content on the start page
- the types of thank you cards and
- the thank you card qualities.

Editors can now create content in multiple languages and provide specific descriptions for each language.

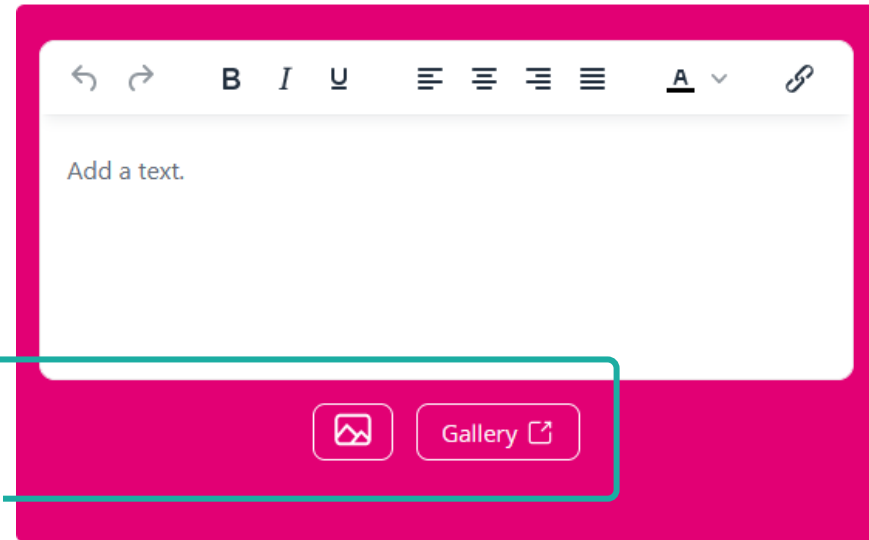

The screenshot shows a settings interface for the Thank You Wall. At the top, there are four tabs: "General Settings" (highlighted in pink), "Start Page", "Thank You types", and "Thank You qualities". Below the tabs, there is a "Save" button and a list of selected languages: "English" and "German", each with a small flag icon and a close button (X). A plus sign (+) is next to the German language, indicating more languages can be added. Below the language list, there is a toggle switch for "Thank You Wall enabled" which is currently turned on. At the bottom, there is a label "Thank You Wall title" and a text input field containing the text "Thank You Wall". A pink circular badge with the word "new" is positioned to the right of the settings panel.

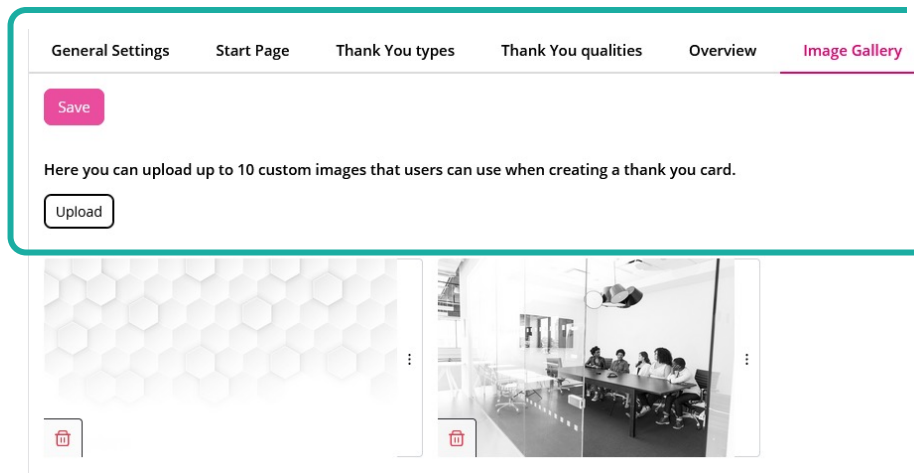

# Customization with images.

Previously, users could use their own images for the thank you cards. With the update we now offer the **possibility to use images from a pre-selection.**

This pre-selection can be defined by an editor in the plugin configuration. **Up to 10 individual images can be uploaded in the "Image gallery" section.**

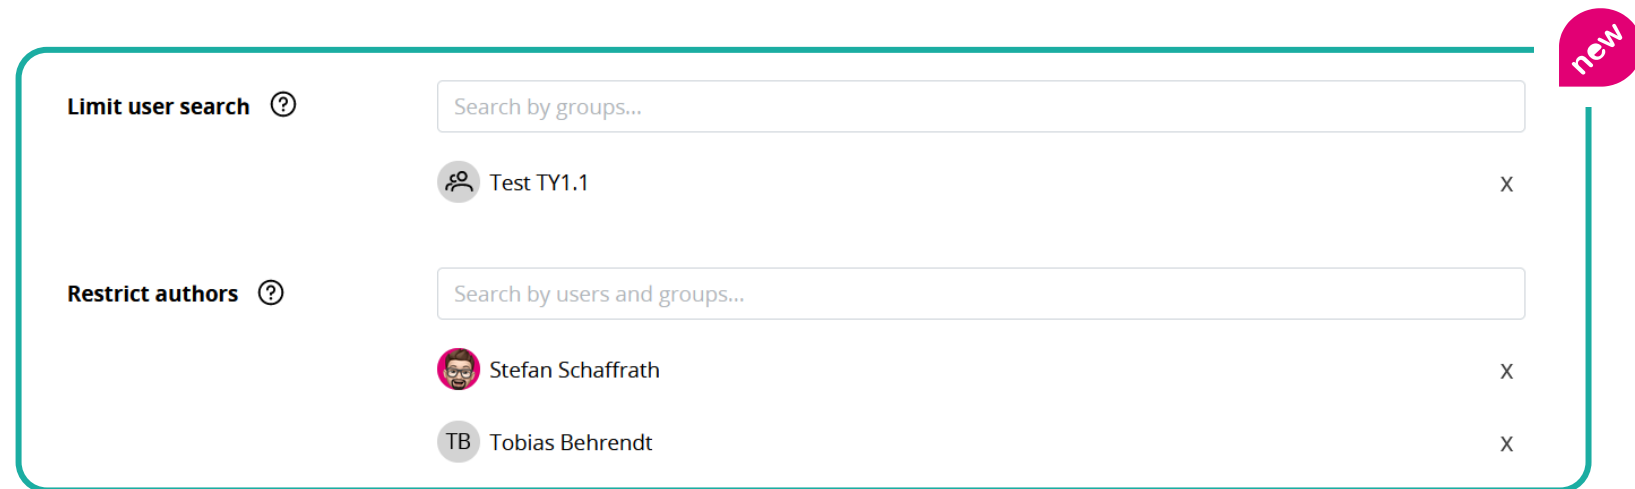

new

# User group limitation for better targeting.

Some platforms or technologies do not offer technical options to ensure that thank you messages are only sent to users who have access to the feature.

With the introduction of the user group restriction, we offer editors the option of restricting the user search for sending thank you messages to certain user groups<sup>1</sup>. When sending, only users configured in the restricted user search will be found.

The screenshot shows a user interface with two sections. The first section, 'Limit user search', has a search input field containing 'Search by groups...' and a list of one item: 'Test TY1.1' with a user icon and an 'X' button. The second section, 'Restrict authors', has a search input field containing 'Search by users and groups...' and a list of two items: 'Stefan Schaffrath' with a user icon and an 'X' button, and 'Tobias Behrendt' with initials 'TB' and an 'X' button. A pink 'new' badge is in the top right corner of the interface.

<sup>1</sup> In Staffbase currently only available for open groups.

02

**Improvements.**

# Re-design and like animation.

## Completely redesigned.

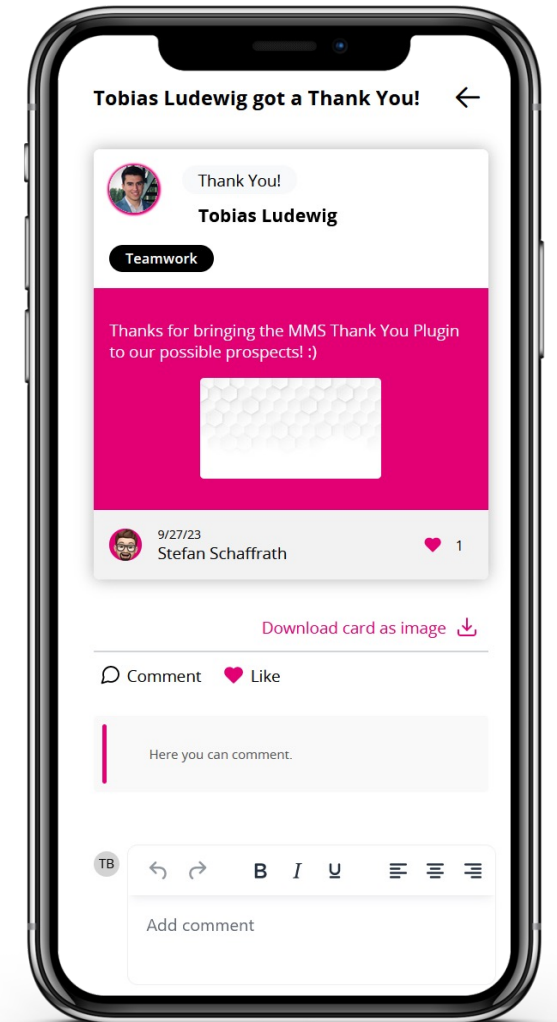

With the update, the Thank You plugin now has a completely new design, with a different look for desktop and mobile.

Both the public Thank You Wall and the private user view now have a **more modern feel**. The individual thank you message tiles on the public wall now include randomly **generated color shapes and a teaser text** of the thank you message. Also, the sender is now displayed directly on the card. The design of thank you messages sent to multiple users has also been improved.

The new design also comes with **minor functional changes**:

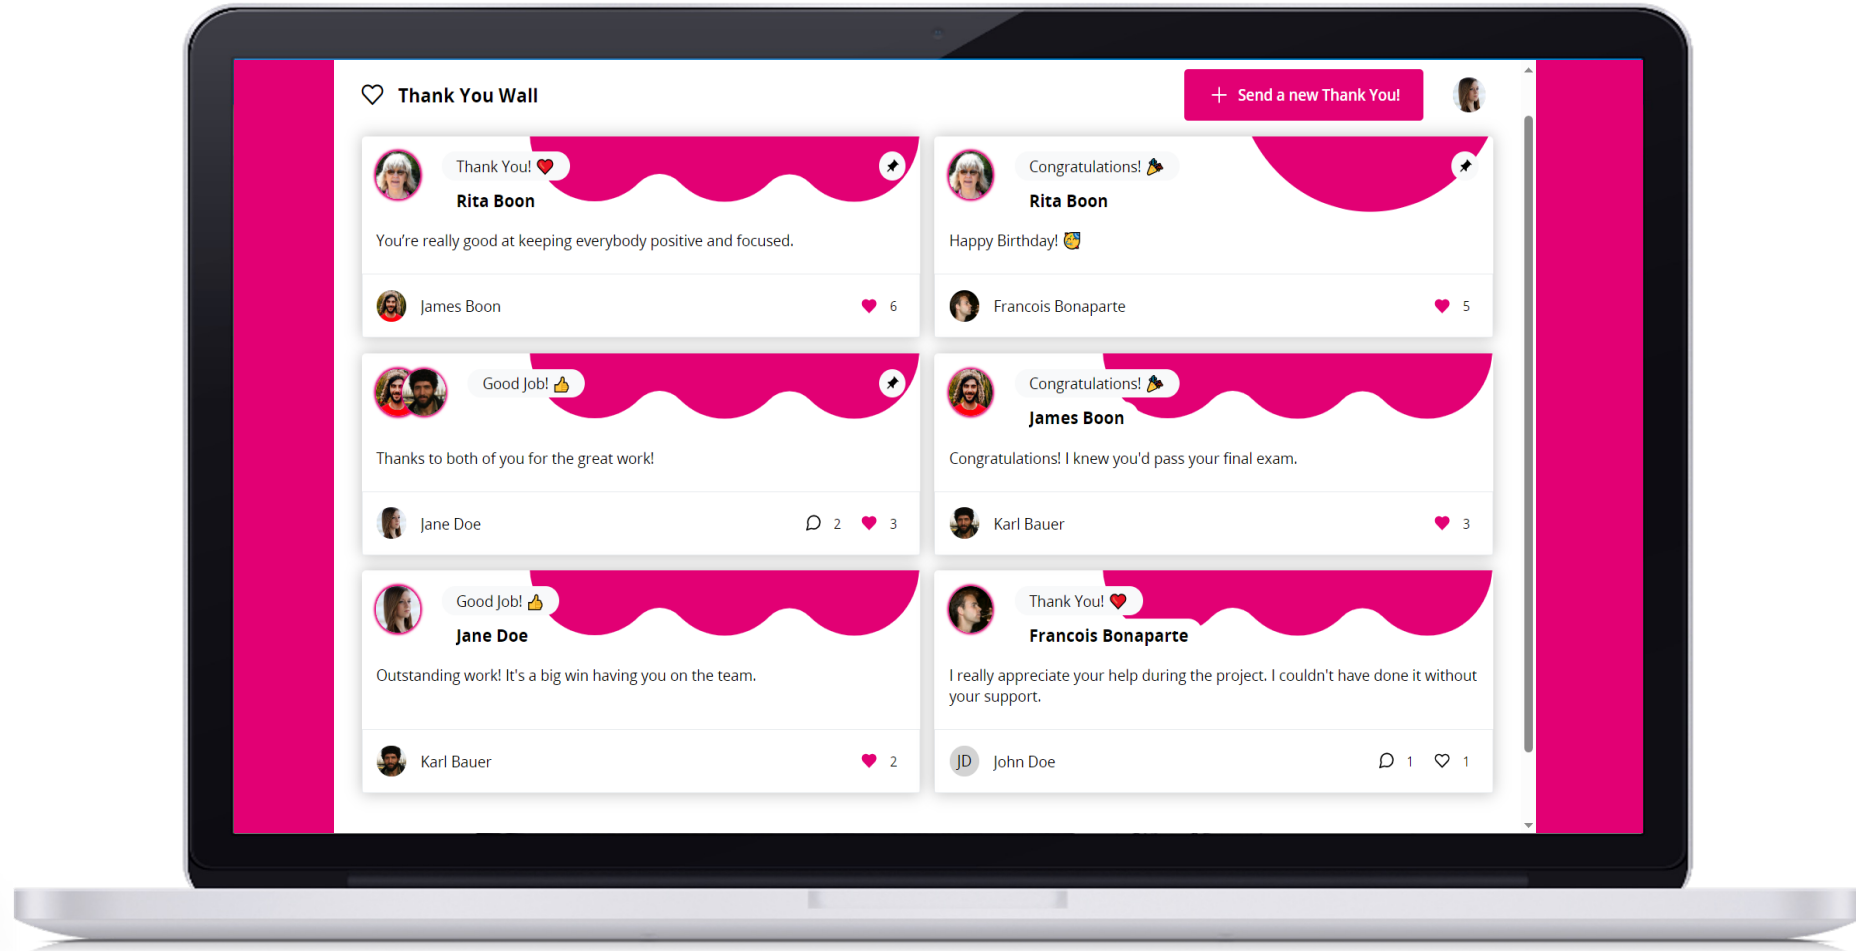

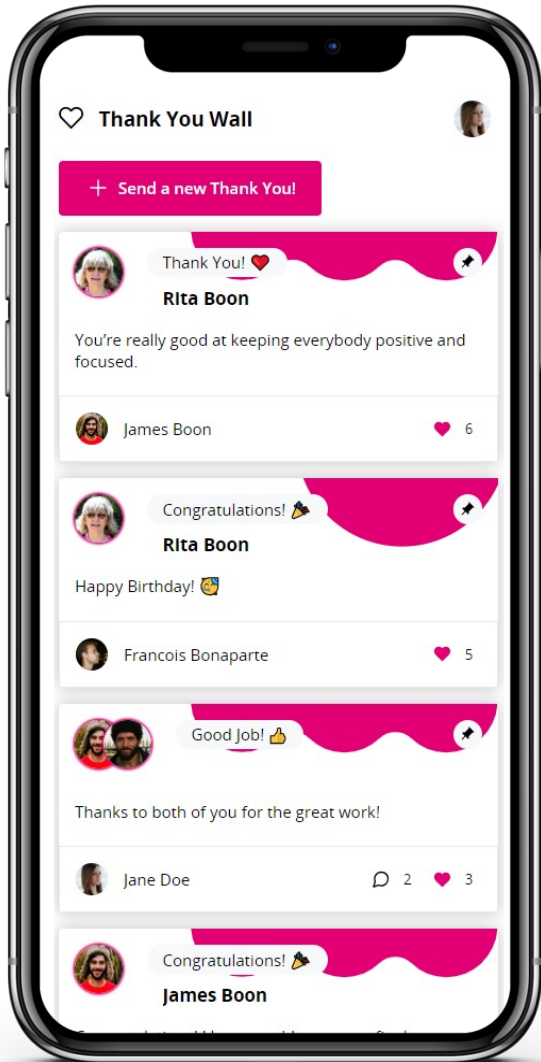

- **A new like animation** that improves usability and encourages more likes.
- **Likes** can now also be given **directly to thank you cards**.

All changes are aimed at giving users the best possible experience and ensuring that **thanking people makes even more fun**.

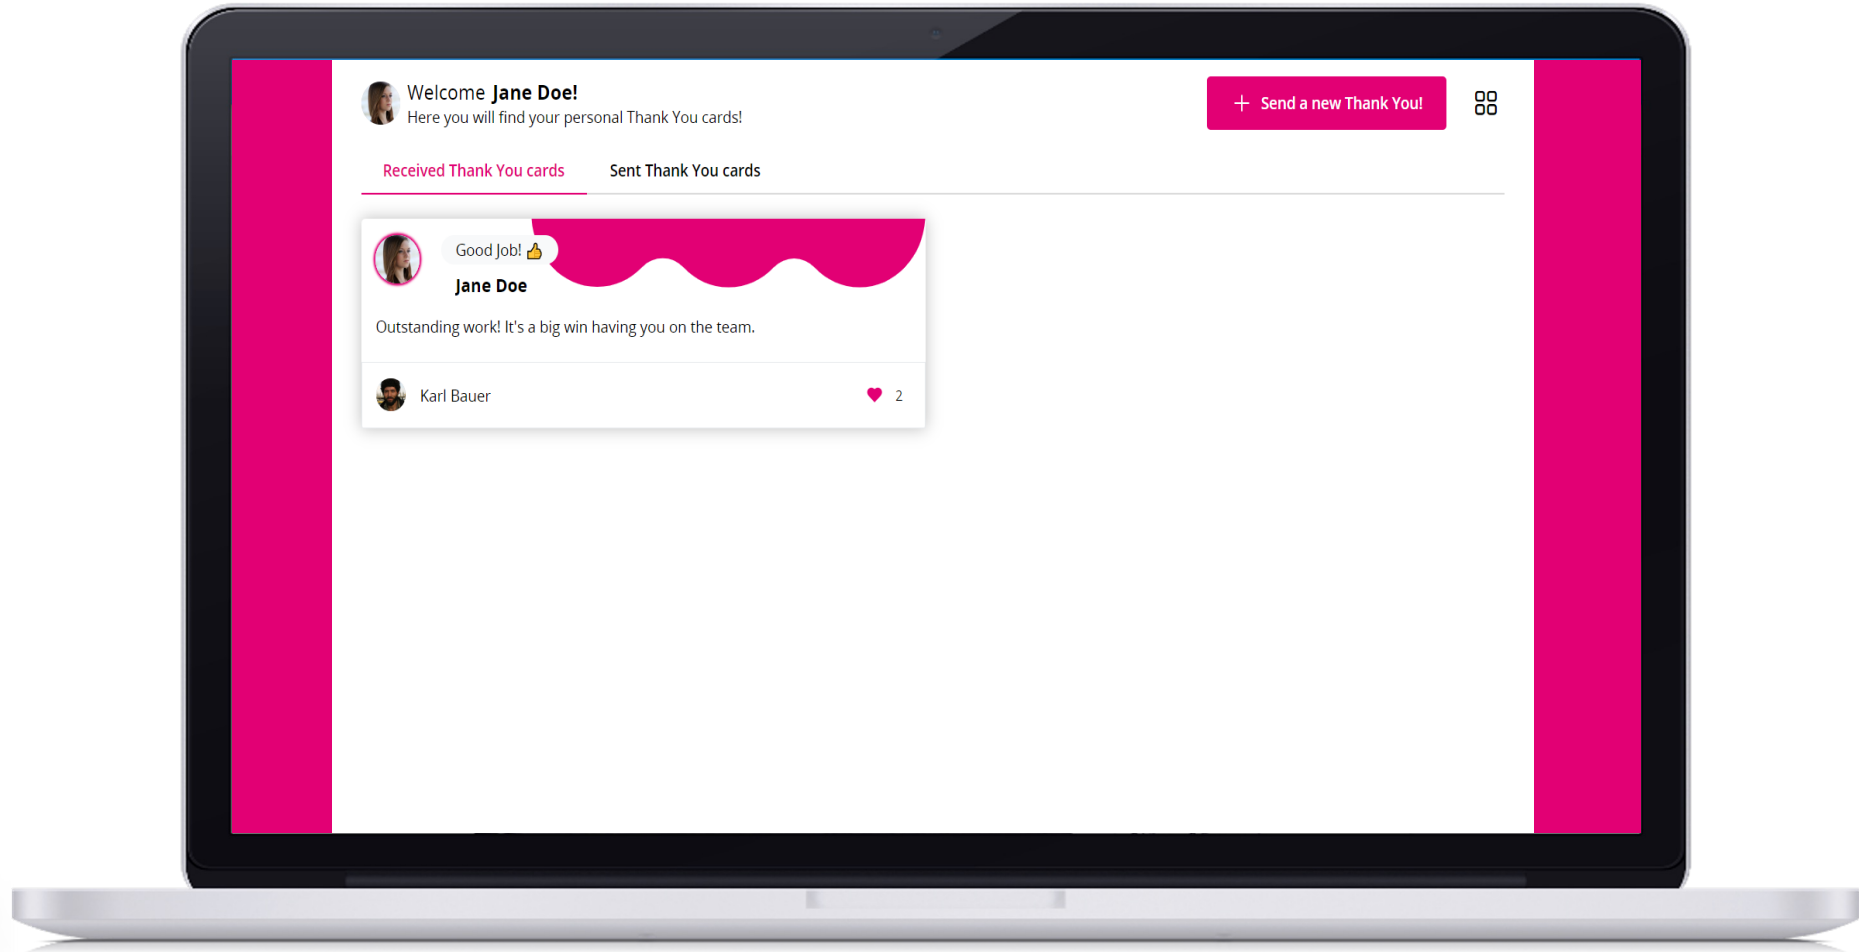

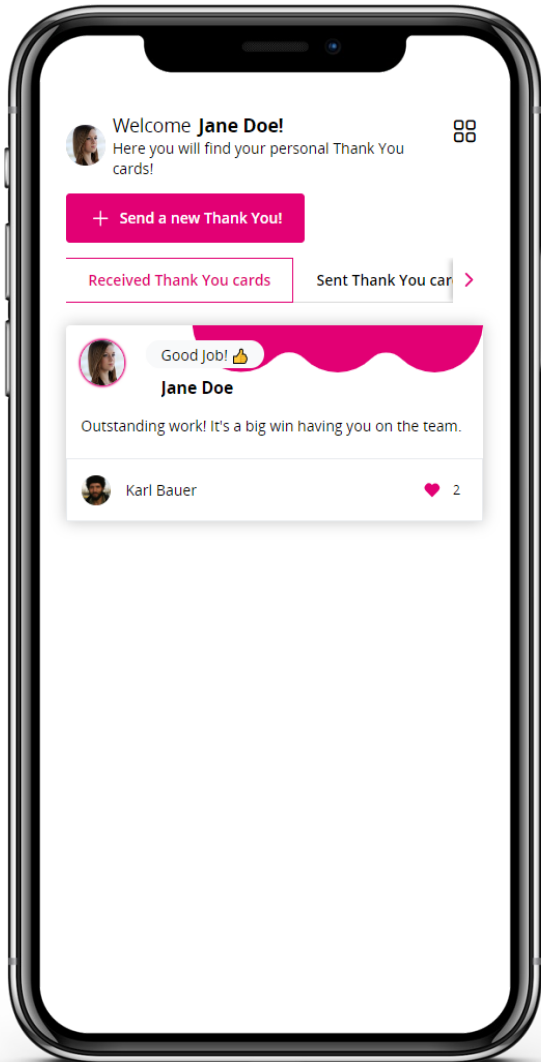

# Re-Design Thank You Wall.

# Re-Design personal user view.

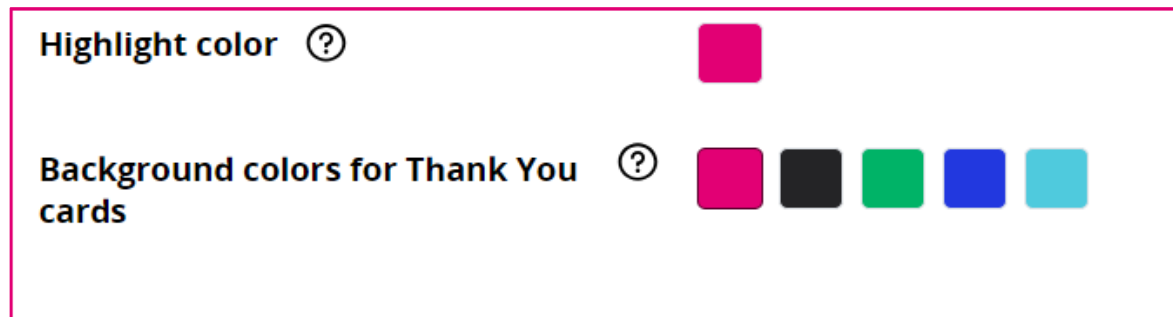

## Configuration of fixed initial values for branding colours - (highlight and background colors).

Editors can now assign individual default values to the branding colors in the configuration. This affects

- the highlight color and
- the available background colors.

It is no longer necessary to re-configure the colors for each new plugin instance or widget.

Note: The setting of the standard colors for your environment cannot be done by the editors themselves. To do this, please contact us at:  
[plugins@t-systems-mms.com](mailto:plugins@t-systems-mms.com).
