NEW FEATURES

- Evaluation as a CSV export
- Schedule sending Thank You cards

IMPROVEMENTS

- Notifications for senders

BUG FIXES

- Improved text display for thank you properties
- Display error with likes fixed
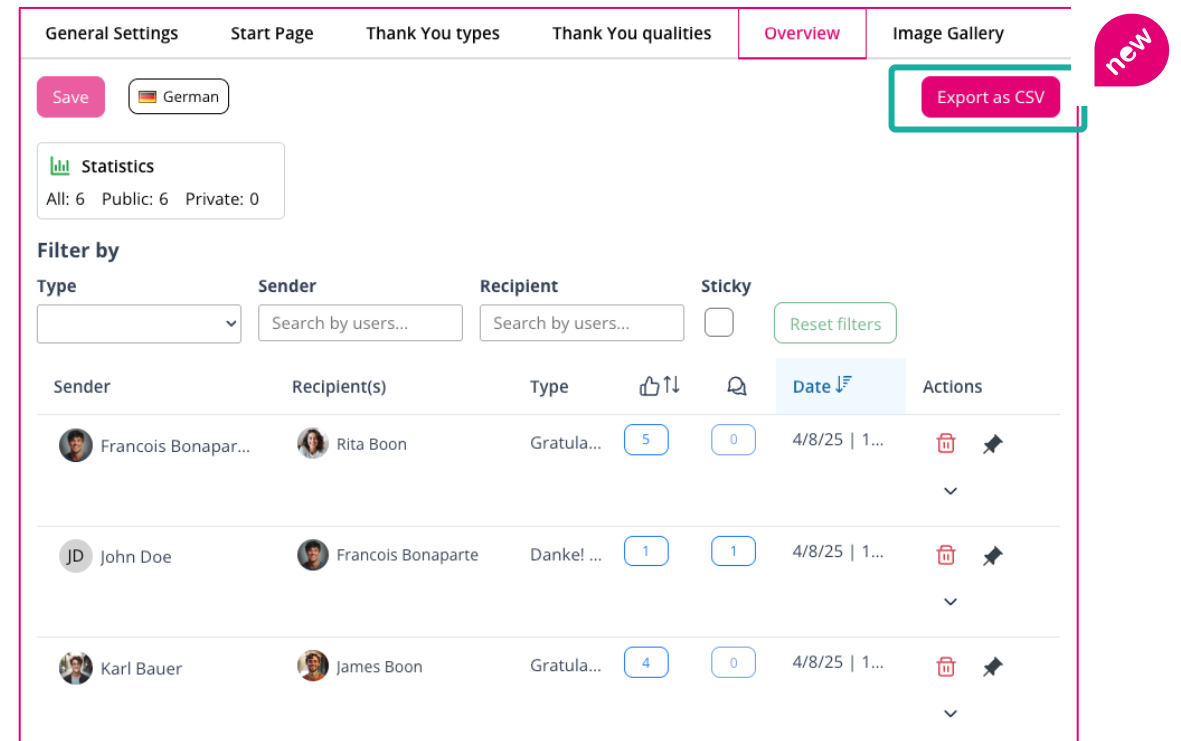

01

New Features.

Evaluation as a CSV export.

This update provides you with an export function with which you **can export all publicly sent thank you cards as a table** - ideal for further evaluations and analyses.

The export includes the following information

- ID of the thank you card
- Sender
- Recipient
- Thank you type
- Selected qualities
- Number of likes
- Number of comments
- Date sent
- Pinned status

This gives you valuable insights into the use and reach of the plugin and allows you to track how often and in what way thanks are said.
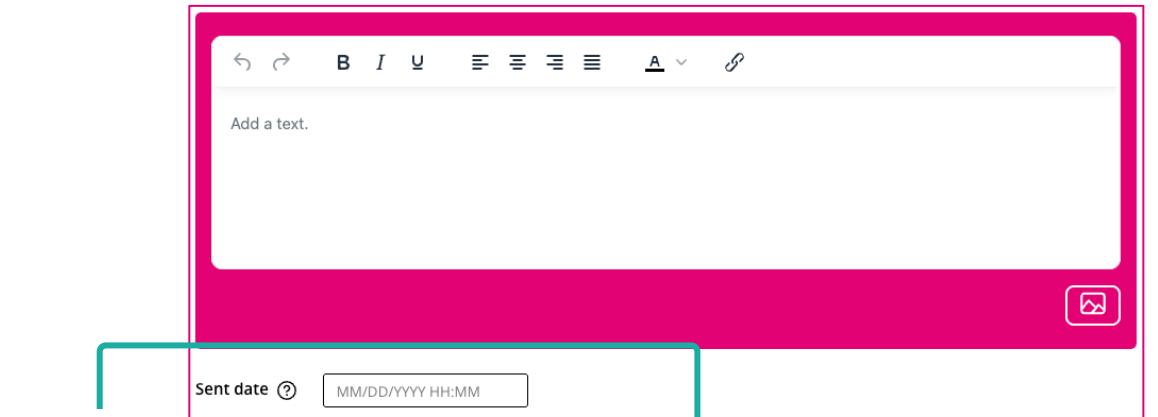

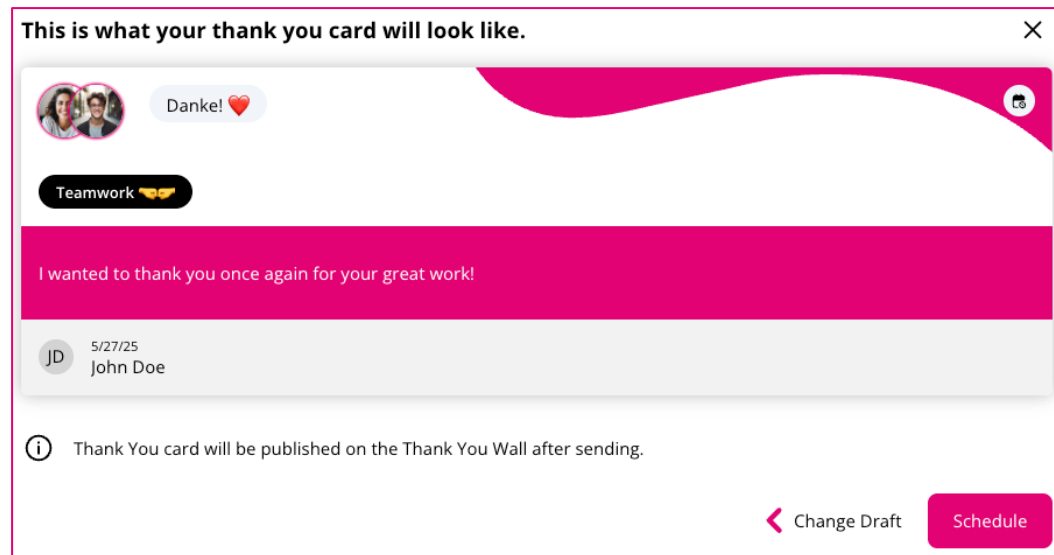

Schedule sending thank you cards.

Previously, users were able to send their thank you cards directly after they had been created or alternatively download them.
With the new planning feature, sending is now even more flexible: **cards can be scheduled in advance and are sent automatically at the selected time**.

This ensures that your message arrives exactly when the moment is right - for example, just in time for an anniversary, birthday or the start of the week.

02

Improvements.

Notifications for senders.

Previously, only recipients of thank you cards received push notifications - for example, when a card was received or when new comments and likes were added.

With the new feature, senders are now also more involved: Editors can define globally in the plugin configuration whether senders should also be notified when their sent card is commented on or liked.

This keeps both sides in contact - and senders find out in real time how their message is being received!

Sender push notifications ⑦   🔵 Notify on new likes   🔵 Notify on new comments

03

Bug fixes.

List of likes not displayed correctly.

Improved text display for thank you properties.

Previously, very long content in the thank you properties could result in the text being cut off abruptly due to limited map space.

With the current update, this situation is now solved in a much more user-friendly way: text that is too long is automatically shortened and marked with a "…".
This keeps the map visually appealing - and readers immediately recognize that it is a shortened display.

Fixed display error with likes.

In a few cases, the list of likes on thank you cards was not displayed correctly - which meant that not all content was visible.

This problem has been fixed with the latest update: All Likes are now displayed reliably and in full.
